# An Age Of Science And Revolutions, 1600-1800: The Medieval & Early Modern World

## **Synopsis**

An Age of Science and Revolutions, 1600-1800, tells the colorful story of a pivotal period in human history, an era that is crucial to understanding our own times. The expansion of trade and city life, the spread and reform of religious institutions, the rise of regional empires and local feudal regimes, and revolutionary advances in science and technology laid the foundation for the modern world. Told through the words and experiences of the people who lived it- kings, queens, and commoners, priests and lay people, explorers, scientists, artists, and world travelers- this is a world history for a new generation.

## **Customer Reviews**

This series is a wonderful resource for 6th-10th grades. Each volume is written by a different author and covers either a geographic area (Europe, Asia, The Americas) or a theme (Empires, Voyages, Science & Revolution); there is also an excellent volume of Primary Sources (with links to each of the other books). The series provides a comprehensive overview of the Middle Ages and early modern period in a very lively and engaging way. It's well written, beautifully illustrated, and presents a vivid picture of life during this period, rather than just a dry recitation of battles, dates, and kings. For teachers and homeschoolers, there are also Teacher and Student Guides for each of

the volumes. For example: A Student Study Guide to The European World, 400-1450 (Medieval & Early Modern World) (Search for Medieval & Early Modern World Guide). Highly recommended!

this was a great book for middle school, and I wish I could get the whole series for my school. The history of science and invention is often glossed over, or ignored, but in fact its influence of the political and military side is huge. Huff's use of age appropriate language and concrete examples allowed the students and teachers to understand the topics and make connections to their more traditional curriculum. It also helped them see connections between classes like science and history in ways they normally would not.
