Customer Reviews

My son likes this book, but it is kind of basic. Even though he is just 4 1/2, he wants more detail. He is very into the solar system and wants all the info. He was disappointed that the dwarf planets were not included.

This book got my 4 year old hooked on planets. We read it at night and since he's got a shorter attention span, we stick to the main parts of the book but as he gets older I imagine he'll enjoy some of the more detailed information in the insets also. He can now identify all the planets and recently asked for his room to be redone with planets and stars. It's a hit.

I bought about 8 books for my daughter for Christmas. She immediately gravitated to this one! She is 5, and read it to my 3 year old who walked up to me and told me that the moon is made out of rocks. Worked for our family!

I am a volunteer reading coach for a first grade class and gave the book to the teacher to give to a student along with others so that each student would get one for the summer. I usually give my two students two books every week. This book is different and I think it was a good learning tool.

I appreciate how scholastic books teach young children using real pictures of real objects. I found this book very useful for my son.

My grandson is in first grade and he really enjoys this solar system book. I recommend this book for the young reader.

My recently turned 5 year old is what I call an advance reader for her age. She loves it.

mostly thus is not a review of this book... buy delivery time...it arrived very quickly... the book itself was okay...nothing terrific,,wish that there was something available that was less 'academic'
