SuperCroc And The Origin Of Crocodiles

Synopsis

Crocodiles and their ancestors are some of the most successful animals that ever lived. At the time of T-Rex, crocs ranged in size from 2 feet to over 40 feet long. They lived on land, in swamps, and in the sea. Some, like SuperCroc, were fierce predators. Some were heavily armored plant eaters. And when all of the dinosaurs (except birds) became extinct, the crocs lived on, becoming the crocodiles and alligators of today. Combining fantastic art and photography with vivid descriptions, Chris Sloan draws young readers into the latest discoveries about the lives of these amazing animals.

You are really going to enjoy National Geographic Supercroc and the Origin of Crocodiles. This hardcover with dustjacket new book is written by National Geo's art director Christopher Sloan (Feathered Dinosaurs) with an introduction by Dr. Paul Sereno, discoverer of Sarcosuchus. This beautiful book is packed with photos plus numerous paintings and illustrations from none other than world famous paleo artists Mark Hallett, Doug Henderson, John Sibbick, and National Geographic's talented new wunderkind: Raul Martin. The informative text describes for readers of all ages topics such as the definition of a crocodile, the world of Sereno's "Supercroc" Sarcosuchus and its fossil discovery, a prehistoric history of crocs and their cousins and the differences and similarities they

share. You'll be amazed at the variety, from lizard sized saurians to giant *Sarcosuchus* who fed on dinosaurs. The final chapter titled "The Last Extinction?" discusses how crocs have survived 200 million years but now are seriously threatened by man. A fantastic full color work for all ages.

Supercroc And The Origin Of Crocodiles by Christopher Sloan (Senior Editor for Art, National Geographic magazine) is a nonfiction children's picturebook about ancient, gigantic crocodiles of millions of years ago, and their modern-day descendants. Enhanced with superbly presented photography, color illustrations, and amazing facts about these ancient reptiles, *Supercroc* is an exciting and highly educational read for children ages 8 through 12.

One of the spillover effects from the recent infatuation over dinosaurs is increased interest in other forms of prehistoric life. This is particularly relevant for other giant prehistoric predators such as *Supercroc*, the topic of this book. Published by National Geographic, this book is filled with great text and great illustrations. The content of the text is understandable by any elementary school student who has a proclivity for science, and for those who don't, the full-page figures are worth the price of the book itself. Best of all, the figures that are drawn to scale are specified to be drawn to scale. Overall, a great purchase.

My 8yr son loves it so it's a good for him. Anything that gets a kid to read works. I wish it had more to it.
