About Habitats: Wetlands

Synopsis

The second title in a new series for the very young highlights the defining characteristics of various habitats, including plant and animal life, using examples from around the world. Award-winning author Cathryn Sill and her husband, noted wildlife illustrator John Sill, offer young readers a first glimpse into wetlands habitats. In simple, easy-to-understand language, this guide teaches children what wetlands are, what kinds of animals and plants live there, and how wetlands help maintain the delicate balance among Earth's environments. John Sill's beautifully detailed full-color illustrations reflect the diversity of wetlands topography from salt marshes along the seacoasts to tropical mangrove swamps. The astonishing varieties of wetland plants and the birds, mammals, and fish that live there are also represented. A glossary and afterword provide young readers with further fascinating details on the earth's wetlands, their creatures, and their conditions.

Book Information

Series: About Habitats

Paperback: 48 pages

Publisher: Peachtree Publishers; Reprint edition (February 1, 2013)

Age Range: 4 - 7 years

Grade Level: Preschool - 2

Customer Reviews

This is my favorite in the Sill Habitat series, my favorite habitat, in fact, but the pictures are beautiful as well as accurate and the choices of animals and plants to include in each picture is optimal. For the casual reader to small children, these books are lovely but for the Montessori classroom, they fit perfectly.

We love this series of books. The words are simple, but the drawings are beautiful complex, and our son finds something new in successive readings. I'm thrilled to have such a nice ecology book for our three-year-old.

LOVE this book!!!! Beautifully written and the illustration are incredible.

Perfect!
